

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS:**

Claims 1-2 (Canceled)

Claim 3 (Currently Amended) ~~The method for varying the size of a plurality of icons of claim 2, wherein said generating step further comprises:~~ A method for varying the size of a plurality of icon images displayed in a display device based upon a user preference value, comprising:

storing icon data representative of a plurality of icon images;

selecting individual icons to perform variable icon sizing;

designating a user preference value for each of the selected icons;

generating icon images of different respective sizes, wherein the different sizes of the icon images are based upon said user preference values; and

displaying said different sized icon images;

wherein the generating step includes sorting icon images into an order based upon said designated preference values, and includes calculating a size gap between said ordered icon images using the following equation:

$$(\text{max}-\text{min}) / (N-1),$$

where N is the number of applications given a preference, min is a minimum icon size and max is a maximum icon size.

Claims 4-7 (Canceled)

Claim 8 (Currently Amended) ~~The computer readable medium of claim 7,~~  
~~further comprising instructions to:~~ A computer readable medium containing program  
instructions to:

store icon data representative of a plurality of icon images;

detect the selection of individual icons;

obtain user preference values for each of the selected icons;

calculate a size gap between adjacent icon image sizes using the following  
equation:

$$(\text{max}-\text{min}) / (N-1),$$

where N is the number of applications given a preference, min is the minimum  
icon size and max is the maximum icon ~~size~~ size;

generate icon images of different respective sizes, wherein the different sizes  
of the icon images are based upon said user preference value;

sort icon images into an order based upon said designated preference values;

and

display said different sized icon images.

Claims 9-12 (Canceled)

Claim 13 (Currently Amended) ~~The apparatus for varying a size of a plurality~~  
~~of icons of claim 12,~~ An apparatus for varying a size of a plurality of icons images

displayed in a window of a display device based upon a user preference value, said

apparatus comprising:

\_\_\_\_\_ means for storing icon data representative of a plurality of icon images;

\_\_\_\_\_ means for selecting individual icons for variable icon sizing;

\_\_\_\_\_ means for designating user preference values for each of the selected icons;

\_\_\_\_\_ means for generating icon images of different respective sizes, wherein the

different sizes of the icon images are based upon said user preference value;

\_\_\_\_\_ sorting means for sorting icon images into an order based upon said

designated preference values; and

\_\_\_\_\_ display means for displaying said different sized icon images;

wherein said generating means further comprises:

calculating means for calculating a size gap between adjacent icon image

sizes using the following equation:

$$(\text{max-min}) / (N-1),$$

where N is the number of applications given a preference, min is the minimum icon size and max is the maximum icon size.

Claims 14-15 (Canceled)

Claim 16 (Previously Presented) A method for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a number of files in the object, the method comprising the steps of:

storing icon data representative of a plurality of icon images;

selecting individual icons for variable icon sizing;

determining said object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons;

generating icon images of different respective sizes representing said objects, wherein the size of an icon is determined by said object characteristic; and

displaying said different sized icon images representing said plurality of objects.

Claim 17 (Previously Presented) The method for varying the size of a plurality of icons of claim 16, wherein said generation step further comprises:

sorting icon images into an order based upon said object characteristic.

Claim 18 (Previously Presented) The method for varying the size of a plurality of icons of claim 17, wherein the method comprises:

determining the size of said icon by:

associating a maximum sized icon image with an object having one extreme value for the object characteristic;

associating a minimum sized icon image with an object having another extreme value for the object characteristic; and

assigning sizes to the remainder of said icon images with objects, in proportion to the objects associated with the maximum and minimum sized icons.

Claim 19 (Previously Presented) An apparatus for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a number of files in the object, the apparatus comprising:

storing means for storing icon data representative of a plurality of icon images;

selecting means for selecting individual icons to perform variable icon sizing;

determining means for determining said object characteristic with respect to each of a plurality of objects associated with said selected individual icons;

generating means for generating different sized icons representing said objects wherein said size of said icon is determined by said object characteristic of said objects; and

displaying means for displaying said variable sized icon images representing said plurality of objects.

Claim 20 (Previously Presented) The apparatus for varying the size of a plurality of icons of claim 19, [wherein said generation step further comprises] comprising:

sorting means for sorting icon images into an order based upon said object characteristic.

Claim 21 (Original) The apparatus for varying the size of a plurality of icons of claim 19, wherein said generation means further comprises:

determining means for determining the size of said icon by:

associating a maximum sized icon image with an object having one extreme value for the object characteristic;

associating a minimum sized icon image with an object having another extreme value for the object characteristic; and

assigning sizes to the remainder of said icon images, in proportion to the objects associated with the maximum and minimum sized icons.

Claim 22 (Previously Presented) A computer readable medium containing program instructions to:

- store icon data representative of a plurality of icon images;
- detect the selection of individual icons;
- determine an object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons, wherein the object characteristic is a number of files in the object;
- generate different sized icons representing said objects wherein the size of an icon is determined by said object characteristic; and
- display said different sized icon images representing said plurality of objects.

Claim 23 (Original) A computer readable medium of claim 22, further containing program instructions to:

- sort icon images into an order based upon said object characteristic.

Claim 24 (Original) A computer readable medium of claim 22, further containing program instructions to:

- determine the size of an icon by:
  - associating a maximum sized icon image with an object having one extreme value for the object characteristic;

associating a minimum sized icon image with an object having another extreme value for the object characteristic; and

assigning sizes to the remainder of said icon images, in proportion to the objects associated with the maximum and minimum sized icons.

Claims 25-26 (Canceled)

Claim 27 (Previously Presented) A method for varying the size of a plurality of icons images displayed in a container of a display device based upon a user preference values designated for at least some of the plurality icon images, the method comprising:

generating different sized icon images, wherein the different sizes of the icon images are based upon said user preference value and

a size gap between said [ordered] icon images is based on the following equation:

$$(\text{max-min}) / (N-1),$$

where N is the number of applications given a preference, min is the minimum icon size and max is the maximum icon size.

Claim 28 (Currently Amended) The method for varying the size of a plurality of icons of ~~claim 25, wherein~~ Claim 27, wherein said container is a window.

Claim 29 (Currently Amended) The method for varying the size of a plurality of icons of ~~claim 25, further~~ Claim 27, comprising the step of:

retrieving said icon image data from memory and scaling said icon image data in preparation for display on said display device.

Claim 30 (Currently amended) A method for displaying a plurality of icons in a window on a display device, comprising the steps of:

storing icon data representative of a plurality of icon images;  
receiving a user command to display icons of varied sizes in said window; and  
displaying said icons with different relative sizes within said window, wherein the different sizes of said icons are based upon characteristics of objects represented by the icons.

Claims 31-40 (Canceled)

Claim 41 (Previously Presented) A method for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a size of the object, the method comprising the steps of:

storing icon data representative of a plurality of icon images;  
selecting individual icons for variable icon sizing;  
determining said object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons;  
generating icon images of different respective sizes representing said objects, wherein the size of an icon is determined by said object characteristic; and  
displaying said different sized icon images representing said plurality of objects.

Claim 42 (Previously Presented) A method for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is an amount of memory that the object uses, the method comprising the steps of:

storing icon data representative of a plurality of icon images;

selecting individual icons for variable icon sizing;

determining said object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons;

generating icon images of different respective sizes representing said objects, wherein the size of an icon is determined by said object characteristic; and

displaying said different sized icon images representing said plurality of objects.

Claim 43 (Canceled)

Claim 44 (Previously Presented) A method for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a measure of how recently the object was added or amended, the method comprising the steps of:

storing icon data representative of a plurality of icon images;

selecting individual icons for variable icon sizing;

determining said object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons;

generating icon images of different respective sizes representing said objects, wherein the size of an icon is determined by said object characteristic; and displaying said different sized icon images representing said plurality of objects.

Claim 45 (Previously Presented) An apparatus for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a size of the object, the apparatus comprising:

storing means for storing icon data representative of a plurality of icon images;

selecting means for selecting individual icons to perform variable icon sizing; determining means for determining said object characteristic with respect to each of a plurality of objects associated with said selected individual icons;

generating means for generating different sized icons representing said objects wherein said size of said icon is determined by said object characteristic of said objects; and

displaying means for displaying said variable sized icon images representing said plurality of objects.

Claim 46 (Previously Presented) An apparatus for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is an amount of memory that the object uses, the apparatus comprising:

storing means for storing icon data representative of a plurality of icon images;

selecting means for selecting individual icons to perform variable icon sizing; determining means for determining said object characteristic with respect to each of a plurality of objects associated with said selected individual icons;

generating means for generating different sized icons representing said objects wherein said size of said icon is determined by said object characteristic of said objects; and

displaying means for displaying said variable sized icon images representing said plurality of objects.

Claim 47 (Canceled)

Claim 48 (Previously Presented) An apparatus for varying the size of a plurality of icons based upon an object characteristic, wherein the object characteristic is a measure of how recently the object was added or amended, the apparatus comprising:

storing means for storing icon data representative of a plurality of icon images;

selecting means for selecting individual icons to perform variable icon sizing;

determining means for determining said object characteristic with respect to each of a plurality of objects associated with said selected individual icons;

generating means for generating different sized icons representing said objects wherein said size of said icon is determined by said object characteristic of said objects; and

displaying means for displaying said variable sized icon images representing said plurality of objects.

Claim 49 (Previously Presented) A computer readable medium containing program instructions to:

store icon data representative of a plurality of icon images;

detect the selection of individual icons;

determine an object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons, wherein the object characteristic is a size of the object;

generate different sized icons representing said objects wherein the size of an icon is determined by said object characteristic; and

display said different sized icon images representing said plurality of objects.

Claim 50 (Previously Presented) A computer readable medium containing program instructions to:

store icon data representative of a plurality of icon images;

detect the selection of individual icons;

determine an object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons, wherein the object characteristic is an amount of memory that the object uses;

generate different sized icons representing said objects wherein the size of an icon is determined by said object characteristic; and  
display said different sized icon images representing said plurality of objects.

Claim 51 (Canceled)

Claim 52 (Previously Presented) A computer readable medium containing program instructions to:

store icon data representative of a plurality of icon images;  
detect the selection of individual icons;  
determine an object characteristic with respect to each of a plurality of objects respectively associated with said selected individual icons, wherein the object characteristic is a measure of how recently the object was added or amended;  
generate different sized icons representing said objects wherein the size of an icon is determined by said object characteristic; and  
display said different sized icon images representing said plurality of objects.

Claims 53-55 (Canceled)

Claim 56 (Previously Presented) A method for varying the size of a plurality of icon images displayed in a display device based upon a user preference value, said method comprising:

generating icon images of different respective sizes, wherein the different sizes of the icon images are based upon user preference values and a size gap

between adjacent ones of the icon images is  $(\text{max}-\text{min}) / (N-1)$ , where N is the number of icon images, min is a minimum icon size and max is a maximum icon size.
